

Important Sales Information

The improved follow ups of our Curils are available now

Our Curil™ K2 and Curil™ T have a follow-up now! The new non-curing Curil™ T2 is not only easier to apply due to its chemical structure, it is also completely solvent-free. Due to the absence of solvents it does not require any airing time and offers twice as much sealing gap capacity as its two previous versions.

As Curil™ K2 and Curil™ T are no longer in the range, orders are automatically switched to the new Curil™ T2, this means you will get the new product directly. For further questions and information, please contact your Elring sales partner.

For all metal-on-metal applications – EL-Liq 74 instead of Curil™

Due to its high viscosity EL-Liq 74 is user-friendly and drip-proof during application, thus supporting a more precise application of the sealing compound. With a higher sealing gap capacity and a higher adhesive strength it ensures perfect sealing.

When sealing in combination with soft-material gaskets, use our Curil™ T2.

Your advantages at a glance:

- Improved sealing gap ability and higher sealing performance
- New formula for a more user friendly application
- Solvent-free eliminating the need for hazardous substance labelling
- No airing time required
- No demixing and no tendency to set

eco-friendly
